Planet occurrence

~

$$\frac{\text{\# of planets detected}}{\text{\# of stars around which a planet could be detected}}$$

“Sounds like a pretty boring telescope proposal, to get thousands of spectra of stars without planets.”
-Mike Liu, Lowmass Lunch

Most astronomers don't
know what they are
doing either.

Hectospec/Hectochelle

- 240-300 fibers
- $R \sim 1300$ for 350-1000nm
- $R \sim 32,000$ for selectable 150 angstrom regions
- 0.8 square degree FOV
